

## Cube Pro

# Mosquito Misting System with Wi-Fi/Bluetooth Controller

### The only mosquito misting system of its kind

Rid your yard of mosquitoes and nuisance insects once and for all. The Cube Pro Mosquito Misting System with a Wi-Fi/Bluetooth controller is powerful enough to handle up to 60 nozzles. Add the optional Zone Kit and double the misting power to 120 nozzles. Or use the Zone Kit to run 2 independent zones. Set separate mist times and durations for each zone. The 26-inch cubed tank is the 55-gallon reservoir and houses all the components safely and securely under the lid.

The user friendly, Wi-Fi/Bluetooth controller connects to a phone through the free Pynamite App. The Pynamite App is used for system setup and as the remote control. The app can access the system from anywhere when the system is connected to the internet. And if no internet is available the system is accessed through the app over Bluetooth. Several phones can be paired to a system, so while you're paired, your customers can be too. And you can pair all your customer's systems to your phone. The controller tracks dusk and dawn, so no more resetting the mist cycles as the days get longer. It will also indicate when it is time to refill the tank.

The Cube Pro fully agitates the solution to ensure a consistent blend with every mist and an anti-siphon valve stops the siphoning of misting concentrate if the tubing gets cut. The specially designed filter helps keep the nozzles clog free.

The Pynamite Cube Pro system operates on a standard outlet.

### OPTION

- ZONE KIT**

Add the Zone Kit option to mist up to 120 nozzles or create 2 independent zones

Only 26 inches cubed  
and still  
55 gallons

## FEATURES

- Custom designed 55-gallon, 26-inch Cube all-inclusive system with Wi-Fi/Bluetooth Controller
- High pressure pump can mist up to 60 nozzles
- Pynamite App allows for easy system set up and serves as a remote control to Stop, Start, or Skip a mist
- Programmable mist days and times - choose the day, the time, and the duration
- Automatically knows dawn and dusk, no need to adjust for Daylight Saving Time
- Agitation is standard
- Liquid Level Status, no guessing when to refill
- Mist Saver suspends misting when the temperature falls below 50F
- Onboard filter keeps sediment from entering the nozzle circuit and clogging the nozzles
- Anti-siphon valve stops solution from emptying if tubing accidentally gets cut
- Pressure maintaining valve holds pressure in the nozzle circuit for quick start up
- Plugs into a standard outlet
